

To Owners with Crawlspace Fans

Now that the weather is cooling off and we are heating our homes, humidity in the crawlspace is once again a consideration and it is time to turn on your crawlspace fans.

In the spring, some owners turned off the fans by flipping the circuit off at the panel since all the plugs in the crawlspace are on a dedicated circuit. If you did this, you can just turn the circuit breaker back on. The other option is to turn them on at the switch. The instructions that come with the programmable switch are as follows:

### TIMER OVERRIDES

- Activate Temporary Override by pressing the push pad to toggle the load (ON to OFF or OFF to ON).
- Activate Permanent Override by pressing and holding the push pad for several seconds to maintain the load in the current state (either ON or OFF).

Until the spring when you will want to turn them off again, the instructions to follow now would be to “Activate Permanent Override”. We hope this solves the re-occurring problem.
